Table 1: H=20 comparison on the 840-instance Caserta benchmark. Values are medians [IQR] across independent runs; lower is better.

Method	Variant	Runs	mean(R/N)	Total relocations
Leveling	–	1	1.0444	36,024
GP	C	30	0.7548 [0.7535, 0.7574]	24,772.0 [24,681.5, 24,871.5]
GP	C+E	30	0.7588 [0.7565, 0.7618]	24,947.0 [24,768.2, 25,057.0]
GP	C+O	30	0.7622 [0.7597, 0.7642]	25,045.5 [24,949.8, 25,149.2]
GP	C+E+O	30	0.7595 [0.7561, 0.7635]	24,969.0 [24,861.5, 25,061.8]
MoE-LoRA	Dynamic routing	3	**0.7343 [0.7343, 0.7344]**	**24,027.0 [24,027.0, 24,027.5]**

Notes: All methods use the same Caserta manifest. GP reports 30 independently evolved rules per terminal set; MoE-LoRA reports three formal seeds; Leveling is deterministic and horizon-independent. No seed was selected using Caserta performance.
