Overall	–	**1.0444**	1.0794±0.0037	1.0444	**0.8544±0.0009**	1.0444	**0.7838±0.0005**	1.0444	**0.7344±0.0001**

Notes: Entries are mean relocations per container (R/N); lower is better. Each group contains 40 instances. MoE reports the mean ± sample standard deviation across three independently trained seeds. Bold indicates the lower value within each horizon. Group S-W denotes initial height S and number of stacks W. Leveling uses only public stack heights, so its complete action sequence is identical for $H \in \{0, 5, 10, 20\}$; repeated values are shown for direct comparison.
